

DivineSide — Post-Meeting Brief

Discovery findings · Core offer · Roles · Immediate actions

Internal · June 2026

1. What the Discovery Meeting Told Us

One coaching institute owner, adult learners (government exam prep), custom app, previously on Classplus. Former teacher turned business owner — deeply understands the product side.

Key signals

Signal	What it means
CONFIRMED Content creation is the #1 pain	PPT making, question papers, study material — named as the most time-consuming activity unprompted. Multiple question paper sets per week. "We can double volume if speed increases." This is a revenue argument, not just time-saving.
CONFIRMED Autonomous system = eyes lit up	When the idea of a fully autonomous system (not a generic chatbot) was introduced, his reaction was immediately positive. Product-market fit signal is real.
CONFIRMED 50+ convertible connections	He is more motivated to share our product with his connections than we are to sell it. This is a distribution channel, not just a client.
NOTE AI trust issues exist	He has reservations about AI handling real business operations. Solved by proof, not by pitching architecture. Show it working first.
CROSSED OFF Dropout detection workflow	Adult learners — no parents, self-motivated. "If a student wants to leave, they'll leave." Valid point. Dropout intervention is for school-age students. Remove from the offer for this ICP.
CROSSED OFF Notes generation	Students prefer self-notes. Not valued here. Don't include in the offer.

2. The Core Offer — What We Build First

AI-powered question paper generation for coaching institutes.

The single most time-consuming activity, named unprompted, with a clear volume unlock. Zero competing tools that do this with institute-specific context. Fast to build, fast to demonstrate, fast to charge for.

The offer in plain language: **"We build you an AI system that generates formatted, syllabus-accurate question papers in minutes — multiple sets, multiple difficulty levels, ready to use. What takes you hours today takes minutes. You can double your output without hiring anyone."**

Why question papers specifically

- Named as the most time-consuming task — highest pain, clearest ROI
- Multiple sets per week = recurring value, not a one-time fix
- Output is tangible and immediate — owner can see the result in the first session
- No switching cost — doesn't touch their existing app at all
- Builds the content context layer (syllabus, format, difficulty calibration) that powers every future workflow

What we are NOT building yet

- PPT generation — second workflow, after question papers are proven
- Result announcement engine — third workflow
- Dropout detection — not relevant for adult learners
- Notes generation — not valued by this ICP

3. The Switching Cost Question

Every product faces two types of cost from the customer's perspective:

Cost type	What it is	In our context
Financial cost	The money they pay	Our pricing — to be determined after first build
Hidden cost	Extra effort, sacrifices, disruption, learning curve, things they have to give up	Leaving their existing app, re-entering data, learning a new interface, losing their saved contacts and history, time spent onboarding

For question paper generation specifically — **there is almost no switching cost.** We don't ask them to leave their app. We don't touch their student data. We take a syllabus document and a format preference, generate papers, deliver as a PDF or Google Doc. They use it in whatever workflow they already have. Zero disruption.

The question Pang should investigate in every outreach conversation:

"What would you have to give up or change about how you currently work to use a tool like this?" — The answer tells you exactly what the real hidden cost is for each customer type. When we know the hidden costs, we engineer them out of the product before they become objections.

4. The Three Functions — What DivineSide Does Now

We operate across three functions simultaneously. Every person owns one.

PRODUCT

Design + Build

Mayank

OUTREACH

Research + Conversion

Pang

FRONT-END

Content + Brand

Shubham

5. Roles — Who Does What

Mayank — Product

- Design and build the question paper generation system — the core offer
- Define what the product looks like, how it works, what the experience is
- Guide Shubham on all front-end execution — Mayank sets direction, Shubham executes
- Own the product vision and roadmap — what gets built next after question papers
- Lead content strategy — video topics, script, on-camera presence

Pang — Outreach

- Get into meetings with as many education business owners as possible — India and foreign markets
- Run the same discovery questions in every meeting: lead gen channel, biggest bottleneck, most repetitive task, hidden costs, referrals
- **Primary research goal:** map the hidden costs of switching. Ask every owner: "What would you have to give up to use something new?" Collect and report patterns back to the team.
- Convert warm leads — especially the 50+ connections from today's meeting
- Start with India connections (fastest access), simultaneously research foreign market (US, UK) — identify where the coaching business owners are online, what communities they're in, how to reach them
- Daily outreach volume target: to be set in today's meeting

Shubham — Front-End

Front-end = everything visible about the DivineSide brand. Shubham executes, Mayank directs.

- **Video production support** — motion graphics and animations for Mayank's technical YouTube videos (the AIOS explainer and future videos)
- **Thumbnails** — YouTube and LinkedIn, consistent with brand identity
- **Social media posts** — visual design for LinkedIn, Instagram, YouTube community posts
- **Product UI/UX** — front-end design of the product itself when we move to building a client-facing interface
- **Marketing assets** — any visual material used in outreach or client presentations
- LinkedIn outreach — alongside Pang, using his network and connections

6. Immediate Actions — What Happens This Week

Who	Action	Purpose
Mayank	Start building the question paper generation prototype. Use the connection's syllabus/format as the first test case. Build it to work for him specifically — that's the demo.	Core offer. First proof. First case study.
Mayank	Finish editing and ship the AIOS video. This is authority-building that runs in parallel — content compounds over time.	Distribution. Credibility. Inbound.
Pang	Contact the connection and get introductions to his 50+ edu business connections. Start with 5–10 warm conversations this week.	Distribution. Research. Pipeline.
Pang	Research foreign market (US, UK) coaching businesses — find where owners gather online (communities, LinkedIn groups, subreddits, Facebook groups). Report back with outreach channels and volume estimates.	Maps the path to dream customers.
Pang	In every conversation: ask the hidden cost question. Document patterns. What do owners say they'd have to give up?	Product intelligence. Reduces friction before it becomes an objection.
Shubham	Finish the thumbnail and motion graphics for the AIOS video so Mayank can ship it.	Unblocks content distribution.
Shubham	Set up LinkedIn presence for DivineSide — profile, first posts, brand assets consistent.	Outreach channel. Credibility.

7. Open Questions to Resolve in Today's Meeting

- **Outreach target:** How many conversations per day/week does Pang commit to?
- **Foreign market research:** Does Pang own this fully, or does Mayank also contribute?
- **Pricing:** What do we charge for the question paper system once it's built? (Don't decide now — decide after the first demo lands. But have a number in mind.)
- **Build timeline:** How long does Pang estimate for the question paper prototype, if he builds it? Or does Mayank own the build entirely?

Next milestone: question paper prototype running for the first client. Everything else is parallel. Nothing should block the build.
